- 10th/12th pass Shop Floor / Production Helpers

## TRAFFIC MANAGEMENT

Road traffic management is a logistics sector that relates to traffic from one place to another, with scheduling and monitoring in the safest, most efficient way.

Accommodating traffic in a secure and effective manner to decrease or eliminate crashes is one of the primary problems of motorway traffic management.

Health and safety law requires that road workers, like any other worker in the workplace, as well as members of the public who pass through the works be held secure. Therefore, in these limited street width circumstances, vehicles moving through the work region must be held under control and limited to higher rates in order to safeguard those who perform the works.

## SWIMMING POOL OPERATION & MAINTENANCE

By having a pool, you become responsible with keeping and maintaining its cleanliness. Likewise you must also make sure that you and your family is safe when using it.

**During the swimming season, your pool should be maintained on daily basis.**

- » Check filter pressure.
- » Clean filter if water is not clear.
- » Remove leaves & debris from strainer basket.
- » You must check on the balance of chemicals that should be present in the waters regularly. Too much chemicals such as chlorine or alkaline can be detrimental to a swimmer's health and so it is a must that the right amount of chemicals should be added to the water.
- » Feed the pool with CHLORINE or other SANITIZER to satisfy its requirements either manually or automatically.
- » Remove any large accumulation of debris on the bottom with a leaf scoop.
- » Check the water level is high enough for the pump to operate correctly (Middle of the skimmer mouth opening).
- » Filtering of the water must be done on a regular basis. This will help the chemicals to move about, keeping the water healthy and safe.

### Weekly Maintenance

- » Use a nylon brush to clean tile & walls of pool.
- » A Stainless steel brush should be used to loosen algae on concrete walls.
- » Test the water and add recommended chemicals.
- » Hose off the deck but aim water away from the pool.
- » Give the Pump basket a clean.
- » Vacuum the pool.
- » Clean the water line tile.
- » Backwash the filter if necessary.
- » make sure there is adequate chemical in a tank for an automatic feeder for the next week
- » Test the pH & free chlorine levels in the pool water. (Note: Don't correct your pH more than once a week.)
- » Electric motors should be monitored weekly.
- » Check the water balance weekly Water Balance mean that as water can and always tries to balance its levels physically, it also tries to balance itself chemically.

## TOWNSHIP / PROPERTY MANAGEMENT

We aim to create a uniquely supportive business environment to attract and serve residential/commercial users and deliver a range of high quality lifestyle services for residents.
